FOR FACTORY OWNERS

Every machine earning. Nothing wasted.

Ventoris watches every machine in your plant and turns its power data into a lower electricity bill, more output, fewer breakdowns and decisions you can trust, wherever you are. Zero cost to start.

Where your money comes back

01
Save electricity
Every way units are wasted: idle machines, unloaded compressors and air leaks, lines left running between shifts, at night and on off days, worn or oversized motors, lights, fans and cooling left on, and heavy loads run in the costliest hours. Same output, lower bill.

02
Maximise production
Real running hours against available hours on every line. Get more out of the machines you already own before you buy another or add a shift.

03
Know the true cost of every product
Electricity cost per product and per line, so every quote covers the real cost and products that lose money show up.

What changes in how you run the plant

4 **Machine health**
A motor or compressor that starts drawing abnormally is flagged early. You plan the repair instead of losing a shift and a delivery.

5 **Control, not just visibility**
Your plant runs to your schedule. Anything running when it shouldn't is flagged to the right person.

6 **Decide from anywhere**
Your plant on a live dashboard, with alerts and a daily report on WhatsApp. Know what is happening on the floor and make decisions about your machines from wherever you are.

7 **Built around your plant**
Your timings, shifts, schedules and production details. Set up for how your plant actually runs.

8 **Compare plants and lines**
See where the same work costs more, and bring every line up to the level of your best.

9 **ISO 50001 data ready**
Clean energy records for ISO 50001 audits and your buyers' sustainability reports.

10 **Smarter big spending**
Size solar, generators, new connections and new machines from your real load, not a vendor's estimate.

0
TO START

Zero cost to start.

No fee, no subscription, no advance. The first month is free: every rupee saved goes toward your hardware. After that, you pay only from savings we prove.

How it starts

1
NDA first
A strict NDA is signed before you share a single bill or reading.

2
Free bill review
We go through your electricity bills and show you where the money is going.

3
Set up for your plant
Sensors fitted on your panels around your shifts, set to your timings and schedules.

4
First month free
You see the results first. Then you pay only from the savings we prove.

Your data stays yours

- Strict NDA signed before any data is shared
- Your data is kept isolated from every other client
- You own it. It is never shared or sold
- Access only for the people you name
- Clear exit terms in writing

Built for

- Textile spinning, weaving, dyeing and finishing
- Plastics, packaging and moulding
- Food, ghee and flour processing
- Paper, board and engineering
- Consumer goods and precision metal processing
- Groups running more than one plant

Start with a free bill review.

Send your last three electricity bills on WhatsApp or email. We will show you where the money is going. No obligation.
